Joseph Patrick Salomeo

Full-Stack Software Engineer · Iloilo, Philippines

jasalomeo@up.edu.ph | +63 945 154 8981 | github.com/ysxiaixsy | linkedin.com/in/jp-salomeo | jp-salomeo.vercel.app

EDUCATION

University of the Philippines Visayas — Miagao, Iloilo

BS Computer Science · DOST-SEI Merit Scholar — *Aug 2024 – Expected 2028*

- Relevant coursework: Software Engineering, Programming Languages, Database Systems, Web Development, Computer Organization (x86 assembly, NASM)

PROJECTS

SACKTO | *Brand, UI/UX Design & Development* · **Champion, Hack Iloilo 2026** — 2026

Next.js, TypeScript, Supabase, PostgreSQL, Vercel AI SDK · sackto.vercel.app

- Co-built a capacity-planning app for the Iloilo Rice Processing Complex that forecasts palay arrivals and suggests booking moves for dryers, storage and mill.
- Designed the brand, wordmark and every UI screen; worked on planning and development from start to finish.
- Farmers on basic phones book services by SMS through an Android gateway; an LLM parses free-text messages but never computes figures.

RateUPV | *Team Lead, UI/UX & Full-Stack · CMSC 126* — 2026

Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, Vitest, Playwright · rateupv.vercel.app

- Led a 4-person team building a campus guide where UP Visayas students review facilities and services, with UP-email sign-in, discussions and a moderator inbox.
- Led the migration from a Vite SPA to server-rendered Next.js, keeping every existing account, place and review and redirecting all old URLs.
- Secured every write with Postgres row-level security and locked-down database functions, removing the need for an API server; covered it with unit, database and Playwright end-to-end tests.

SolNexus | *Scrum Master, Lead UI/UX & Full-Stack · CMSC 128/129, real client* — 2026 – Present

React, TypeScript, FastAPI, PostgreSQL, dbt, Apache Airflow, Docker

- Building, with a 5-person team, a lead pipeline that replaces SolTech EMR's manual spreadsheet with a daily follow-up list and per-clinic history, fed by Gmail ingestion into PostgreSQL, dbt models and Airflow.
- Built staff authentication end to end: FastAPI sessions, protected routes with an 8-hour idle timeout, the login page and its tests.
- Built the React frontend foundation (routing, API client, mock mode) and drew the wireframes; run the team's Scrum process.

Tavern Card Game | *Solo Developer* — 2026

Expo, React Native, TypeScript, Zustand, Supabase

- Built a mobile recreation of Gwent alone (94 commits) with three AI difficulties, four factions, a deck builder and a standalone Android build.
- Wrote a deterministic game engine in pure TypeScript with seeded randomness, covered by 170+ engine and AI tests and a bot-vs-bot terminal simulator.
- Added online play through a Supabase Edge Function that validates every move with the same engine; row-level security shows each player only their own view.

TrapScript | *Co-creator · CMSC 124* — 2026 – Present

Rust

- Building a dynamically typed scripting language and tree-walking interpreter from scratch: hand-written scanner, recursive-descent parser and evaluator, each with its own REPL and CI test suite.

LEADERSHIP & INVOLVEMENT

- **Website Development Committee**, PAGBUTLAK — 2026 – Present
- **Publications Committee**, Komsai.org (UPV CS society) — 2024–2025, 2026 – Present
- **Publications Committee**, UPV Elektrons — 2026 – Present; **Arts Committee** — 2024–2025
- **Student Researcher**, Philippine Science High School – Western Visayas — 2022–2024: two-year, 3-person study identifying endophytic fungi with pharmaceutical potential

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Rust, SQL, PHP, Dart, C, Java, HTML/CSS

Frameworks: Next.js, React, React Native (Expo), FastAPI, Flutter, Tailwind CSS, shadcn/ui

Data & Platforms: PostgreSQL, Supabase (RLS, Edge Functions, Realtime), MySQL, Firebase, dbt, Apache Airflow, Vercel

AI: Vercel AI SDK (LLM integration), Claude Code, Codex

Tools & Design: Vitest, Playwright, Git, Docker, Jira (Scrum), Figma, Adobe Illustrator, Adobe Photoshop
